## REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

Regarding claims 13 and 14, the prior arts fail to teach or fairly suggest a communication method comprising the steps of connecting a second communication line capable of bi-directional communication to bridge type transmitting means for transmitting data to a first uni-directional communication line, thereby virtually carrying out the bi-directional communication over the first communication line, wherein the transmitting means automatically detects addresses of nodes connected to a network at the transmitting side, in combination with other limitations as specified in the independent claims 13 and 14.

Regarding claims 15 and 16, the prior arts fail to teach or fairly suggest a communication apparatus comprising control means for determining a destination of a packet inputted through a predetermined interface, the control means includes detecting means for automatically detecting addresses of nodes connected to the network connected to the interface, then determining which network the packet is transferred to in accordance with the destination, and then executing transfer processing only when transfer is necessary, in combination with other limitations as specified in the independent claims 15 and 16.

### ***Conclusion***
